

Designing and Teaching an Online Course

This course demonstrates many best practices while exposing you to blogs, wikis, and various other tools available to enhance your online teaching experience. Learn about the online environment from both student and instructor perspectives. Experience the benefits of building community and sharing ideas. Learn about copyright issues, peer review, and other important topics.

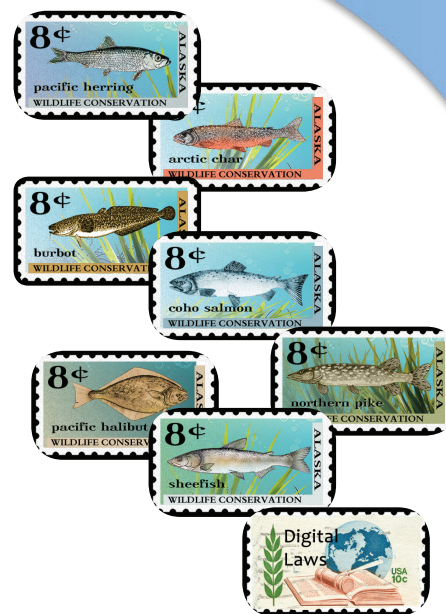

All work will relate to your own course development process as you organize and structure your course, write objectives and link them to assessments. ED 593 will showcase many of the technological tools available to you as you develop your course.

With preparation and planning, creating an online course can be fun and rewarding. The process applies to and will even improve your face-to-face teaching.

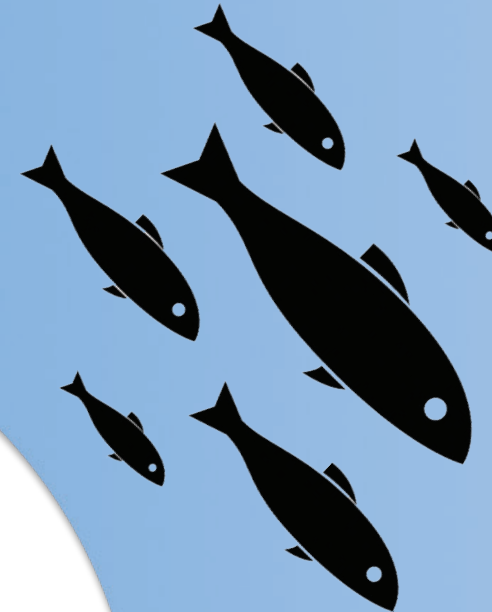

ED 593 has integrated learning about online education with learning about eight distinct and amazing Alaskan fish. See what these fish have in common with teaching online and earn "Fish Stamps" as you progress through the course. Successful faculty will receive an Alaskan Fish Recipe Booklet upon completion of the course.

2013 Blackboard Learn™
Exemplary Course Award -
Director's Choice!

Experience a unique online course developed to prepare faculty to conquer the challenges of online learning.

Cost for this course is \$90, an external credit fee not eligible for the usual faculty tuition waiver. This course is intended for university faculty who are interested in teaching in an online environment.

The course begins September 15, 2014. All books and materials provided to participants free of charge.

If you have any questions, please contact Mary Purvis: mmpurvis@uas.alaska.edu.
