

# VIRTUAL

VERSUS

# NON-VIRTUAL

---

CHOOSE THE ONE THAT IS RIGHT FOR YOU

---

Virtual computers run and store all data on UAS servers.

Non-virtual computers use an internal hard drive.

Can be accessed from anywhere that has an internet connection.

Does not need an internet connection to function.

Consistent work environment across multiple devices.

Ideal for people who travel frequently, present from multiple locations, or have a poor internet connection.

System updates are centrally managed and installed automatically.

Users schedule and manage system updates.
