Darkened cells indicate the primary system for a given service.

**UAS Online Strategy:**

A comprehensive course management system incorporates disparate systems and services. Traditionally, these systems operate independently with the functionality "branded" with the name of the current vendor. This creates confusion when the University chooses to change vendors or vendors change product branding.

The "UAS Online" strategy seeks to meet the following goals:

Technical Goal: Integrate disparate systems into a single "learning environment" for the students and faculty. Integrated systems share a common navigation, share data, and streamline authentication with a "single sign on."

Communication / Marketing Goal: Establish a long-range institutional branding for the diverse services.

Policy Goal: Establish/support institutional and departmental standards for CMS use. Examples: course availability (which courses will have sites) and content (syllabi, grade books).
